

WATERBEDS

BEST WAY TO SLEEP

Water lilies not only have beautiful flowers.

They are also very adaptable. Although they have strong, firm roots they are extremely flexible. The water lily is in its element regardless of wind, weather or waves.

This is why we chose the water lily as our company logo. It perfectly embodies the values that you can expect from AKVA: naturalness, flexibility and aesthetics.

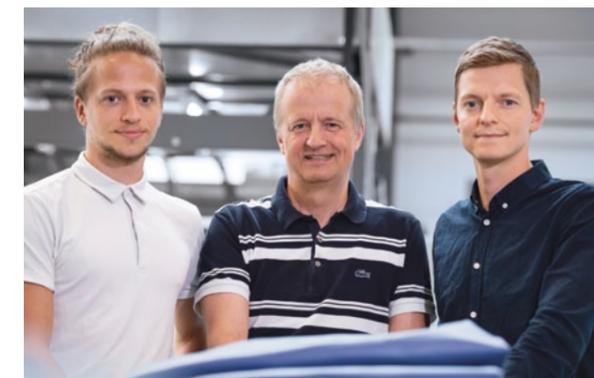

DEAR FUTURE BETTER SLEEPERS,

You are about to decide which waterbed you would like to buy. We know that this is an important decision. We are talking about something as important as your quality of sleep meaning almost one third of your life. We think you should be spending this time in the bed of your dreams.

We hope that we can convince you of the improved quality of life that you gain from choosing an AKVA waterbed. If you have back problems, suffer from insomnia or simply want something extraordinary: we will always find the right bed to match you, your needs and your personality 100%.

We would be happy to welcome you to our production facilities here in Ry, Denmark. Our doors will always be open for you. Perhaps you would like to combine a visit with a short holiday. Then we will show you around our factory, our showrooms and initiate you into our world of waterbeds.

THE AKVA MANUFACTURING

When you think of Denmark you probably immediately think of beaches and heath land. However, there is an area in the middle of Denmark that looks very different. It has extensive woodland and numerous lakes of different sizes that are connected by canals. This area is very popular for outdoor sports such as yachting, canoeing and biking. The quiet areas along the banks are dotted with anglers waiting for the next fish to take their bait while looking thoughtfully around admiring the vigorous setting of their activity. Here life paces down. The tranquillity is perceptible.

Ry is situated in the middle of this idyllic landscape, and so are our production facilities. Your waterbed is made here in a free and easy atmosphere by committed employees many of whom have been with the company for a very long time. We call our place of work the 'manufactory', as we are very serious when it comes to the essence of the statement:

'to make something by hand.' Every part of your waterbed – from the base and the water mattress to the heating system – is individually crafted under one roof. Our motto is: if you want to be sure that something is done well, it's always best to do it yourself. This we stick to.

You might wait a little longer for your waterbed after placing the order, but in return you will get an individually tailored waterbed that was not produced until approximately one week prior to dispatch. This way you can be sure that all components are not just stocks goods, but all recently produced and always according to the most updated technical procedures and methods.

A main focus of ours and a guarantee for you: every area of our production upholds strict work safety standards, and all the raw materials that we use are tested for safety and free of harmful substances.

On request we also manufacture special sizes or even use your personal textile if posted to us.

LETTERE KAN DET IKKE BLIVE

ENVIRONMENTALLY FRIENDLY

For several decades we have focused massively on sustainability and environmental considerations. We carefully pick our suppliers and always aim to be considerate in the way we handle our resources. All employees at AKVA practise and support this attitude – every day.

Our production is 100% CO₂ neutral and based on renewable sources of energy such as wind and water power. We only buy wood from sustainable suppliers and much of our raw material contains a large share of recycled materials.

 Look out for this pictogram. It will guide you through our range of energy saving accessories that, of course, can also be installed in existing AKVA waterbeds.

DID YOU KNOW ...

We know that the subject waterbeds brings on many questions. However, you will see that we have really good answers to most of them. Your dealer would be pleased to answer any further questions you may have.

■ When is a waterbed particularly recommended?

The bed surface that adapts to the body and the adjustable warmth has a positive effect on your well-being during the waking hours. Both are also advantageous in the following cases:

- Head and back pains
- Pains in the neck, back of the head and back due to wear on the vertebrae, the thoracic spine and the lumbar spine
- Lower back pain due to wear on the joints at the base of the spine
- Back pains caused by muscular tension or incorrect spinal posture (scoliosis, kyphosis, flat back etc.)
- For lying with least possible pressure
- Also for those suffering from allergies

■ How does my sleep improve?

Between age 20 and 60, we spend more than 15 years in bed. Within a period of 50 years we go to sleep around 20.000 times. Sleep is a fundamental precondition for all of us when it comes to staying healthy and in good shape. A water mattress helps you relax and sleep well. That is what we call quality of life.

Sleeping on an AKVA waterbed will prevent pressure points e.g. on shoulders and hips. This will relieve the strain on the circulation, and you will not turn as often in bed during the night. The water mattress supports your entire body evenly, and it makes your muscles relax. All in all – a waterbed provides you with the fundamental preconditions for a deep, peaceful and uninterrupted sleep.

■ Is a waterbed good for my back?

A waterbed supports your spine and the muscles in your back by adapting to the outline of your body.

One of the unique advantages of water is that it is displaced under pressure – not compressed like other bed-types. The mattress doesn't sag, but precisely and

immediately adapts to your body contours. Weight and build are unimportant, and throughout its lifetime the mattress stays as comfortable as on the first day. Low contact pressure and relaxing heat support your back, joints and vital functions – now and in future.

■ How hygienic is a waterbed?

The hygiene of a waterbed is difficult to surpass: skin particles do not disappear into the mattress, as is the case with conventional mattresses. They remain on the surface of the water mattress where they can easily be wiped off at any time. House dust mites cannot exist on the surface of the waterbed and therefore you can be sure of an allergy free sleep.

Every person gives off half a litre of moisture every night. This liquid seeps into and is absorbed by the conventional mattress. In a waterbed the liquid will evaporate due to the warmth of the bed that rise through the mattress and the bed clothes. Your local AKVA dealer will be happy to answer even more questions.

■ Won't I get cold in a waterbed?

During the cold months a waterbed will supply the body with warmth instead of extracting it such as when your body needs to warm up a mattress or a quilt. Your muscles will relax, the entire body will loosen up, and you will fall asleep much faster.

One of the greatest advantages of an AKVA waterbed is its digital, low-power heating system with a day/night setting. You can set the temperature you prefer.

During the warm months the bed will act vice versa. The body will emit its heat to the water, and you will be less liable to sweat. In short: the bed will feel 'cool' in the summer and warm in the winter.

■ How does a waterbed work?

In a waterbed you float on a large, individually temperature controlled mattress. Your whole body is evenly

supported. No other mattress system adapts so perfectly to different body shapes. This is why a waterbed is actually a bed that you lie in and not on. You can individually adjust the perfect position of relaxation through the volume of water, but also the right choice of stabilisation layers has an influence when aiming the absolute physiologically correct position of revitalisation.

■ Will I feel wave movements in my waterbed?

People's sleeping needs are just as individual as people themselves: some prefer the rocking movement of the waves, when they turn in the bed, and others want no movement at all. To meet your individual sleeping comfort needs, you can choose from a range of 21 different stabilisation levels with optional lumbar support.

■ How do I keep the water fresh?

When you first fill your water mattress with fresh water, a water preservative must be added to keep the water free of germs. As you don't renew the water – unless you move home and have to dismantle and reassemble your bed – the preservative is added once a year.

■ Isn't a waterbed too heavy for my apartment?

Thanks to a specially designed base with integrated weight distributors, the weight of a waterbed per square meter is far lower than that of, say, a bath tub, cupboard, refriger-

erator or washing machine. Depending on the model, the load will be approx. 180 kg/m² for a total weight of approx. 600 – 800 kg. This load is borne evenly by the floor and distributed over an even larger surface so that the average load per square meter is even lower.

■ Do I need separate insurance?

Unfortunately this rumour is very persistent. The answer is no. Any damage is covered by a recent house contents insurance in the same way as an aquarium. However, if your insurance policy is somewhat older, we recommend contacting your insurance company to be on the safe side.

■ Will all the water seep out of the bed, if it has a small leak?

In normal use – and this includes jumping in it – the water mattress will not leak. The high quality, extremely durable vinyl that the water mattress is made of and all the welding is subject to strict quality requirements and tests. This is the only way we can offer you a long-standing warranty with a clear conscience.

If the mattress is punctured – deliberately or by accident, you don't need to worry about a fountain of water streaming out of the bed, because the water is not under pressure. In other words, if a small amount of water runs from the mattress, it will be captured by the safety liner that the mattress is placed in. Depending on the position of the leak it is fairly unproblematic to repair it with some glue and a patch of vinyl.

AKVA VEGA

Clear lines. The VEGA bed system, designed by designer Per Weiss, is hallmarked by its contemporary style and timeless design. The exquisite combination of leather and chrome frame makes VEGA appear exclusive and elegant. The design will make you draw parallels to a loft in New York of which you can dream while you peacefully slumber.

The lamp is integrated into the headboard

- Minimalistic, modern design
- High level of comfort due to the soft-side foam frame
- The advanced construction makes making the bed very easy.
- The bed is available in genuine and artificial leather and all our textile colours.
- Complete the elegance of the bed with the VEGA headboard, optional lamps as well as matching pouffes.
- Possible headboard: VEGA

←
DESIGN:
PER WEISS

Inspired by the Scandinavian design tradition, the Danish furniture designer combines elegance with a contemporary look.

The chrome frame makes the bed appear to be floating

VEGA pouffe

Available as a soft-side version with sloping sides and as SOFT Q with a straight cut mattress (see page 14 / 15)

Headboard MT. RY (22 cm wider than the bed)

Hidden storage in base drawers

The base appears almost invisible

- Frame upholstered with a textile, genuine leather or artificial leather – a unique and individual look
- Traditional box spring design with a very comfortable height
- Optically almost invisible base
- The bed legs are made from solid beech or oak and available in several stained colours, oiled, white oiled or lye-treated.
- Uncompromising, solid construction
- Possible headboards: see pages 36–37 (except for MT. COOK and EVEREST)
- As always with AKVA you individually choose your favourite mattress system and level of stabilisation for maximum sleeping comfort.

AKVA NORDIC SELECT

On the outside: modern box spring design. On the inside: uncompromising sleeping comfort. The majestic height of the bed combined with the voluminous, extended mattress really gets your dreams going. The lying comfort is at its peak – no compromises.

Available as a soft-side version with sloping sides and as NORDIC Select Q with a straight cut mattress (see page 14 / 15)

TAILOR-MADE PYJAMAS

A waterbed is always something very personal. The stabilisation, filling volume, temperature: many factors contribute to optimising your sleep. This is why AKVA will never fob you off with beds produced in batches. Instead we put together a bed according to your wishes. Just like tailor-made pyjamas.

Cover

AKVA offers several different covers for your personal comfort – from flexible and stretchy to firm and supportive. All covers are allergy-friendly, washable at high temperatures and can be tumble-dried. They are all certified according to the Oeko-Tex Standard 100.

Water mattress

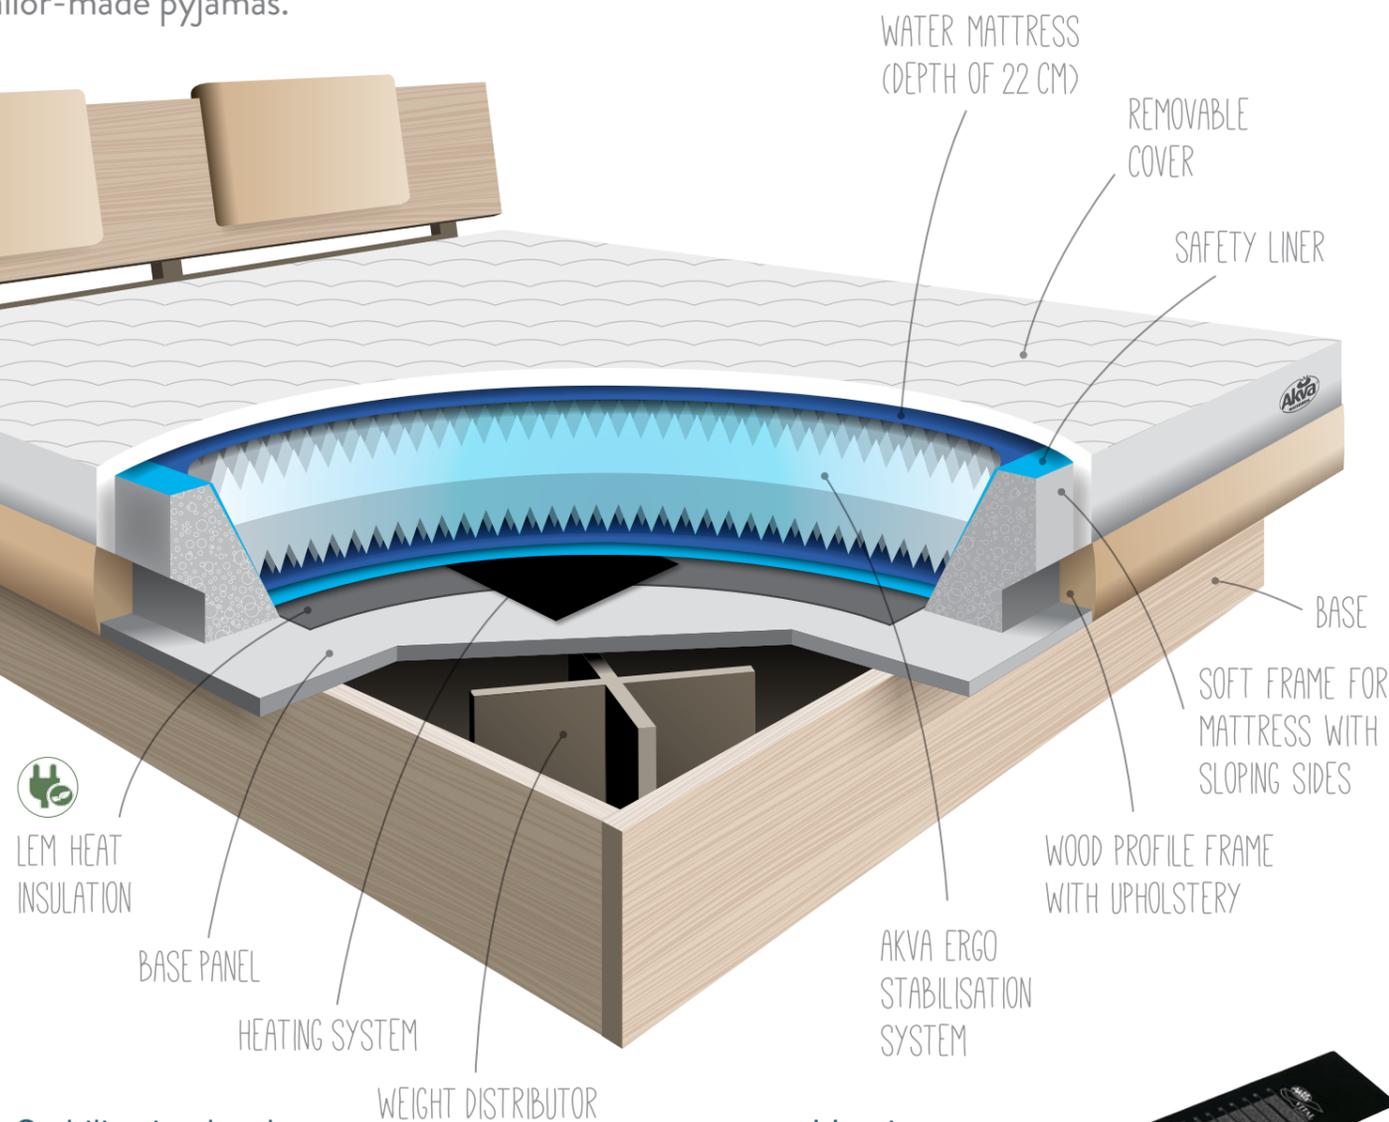

Our laminated, premium vinyl for water mattresses and safety liners form the heart and safety centre of your waterbed and guarantee the unsurpassed AKVA comfort. AKVA supplies a guaranteed phthalate-free vinyl that is certified to Oeko-Tex Standard 100 and therefore is suitable for babies and small children. All our high-frequency welded seams are covered by a five year warranty.

Uno or dual system?

All waterbeds are available as either a uno system (one mattress and one temperature setting) and from bed width of 150 cm as a dual system. If you choose a dual system, you and your partner can select an individual stabilisation level and decide on different temperatures. A dual system also ensures a more peaceful sleep, as the movements of the partners are considerably reduced.

Dual system

Stabilisation level

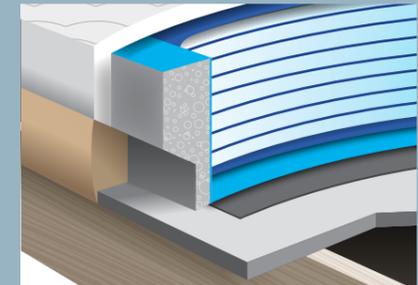

You have the choice between 13 different stabilisation levels with fleece layers and 8 with a special, open pored foam. How quickly your mattress settles depends on your chosen stabilisation level and maybe even optional lumbar support. Your local AKVA dealer will be pleased to assist and guide you to the choice that is perfect for you. For further information: see page 22.

Heating system

Everybody knows it: in the summer it is too hot to sleep, and sometimes in the winter it is too cold. One of the best things about a waterbed is the tempered mattress that you can adjust according to your personal needs. With our AKVA VITAL low-voltage heating system you have an easy-to-programme, energy-efficient system with an optional day and night setting.

Waterbed design using the AKVA NORDIC (Q) as an example

Q soft frame for cube-shaped water mattresses – with comfort level F8

AKVA waterbeds are available in three different versions:

soft-side

The diagonally cut soft frame forms a comfortable place to sit on and lends the water mattress (chamfered form) stability for a free-standing installation.

Q soft-side

The straight soft frame combined with a straight cut water mattress provides a particularly high level of bedtime comfort with effective adaptability and a high water volume.

hard-side

The traditional, uncompromising design of the waterbed presupposes a suitably strong bed frame to support the shape of the water mattress.

HEADBOARD
MT. VENTOUX

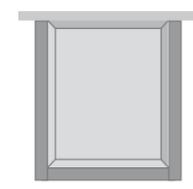

AKVA NORDIC

Multi-talented. The bed NORDIC combines the strength of a solid foam frame with an integrated upholstered bed frame. If you choose the bed with a headboard, NORDIC comes with an extended lying surface like most of AKVA's waterbeds. The uncompromising technique of this bed will satisfy your every need.

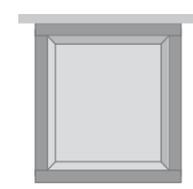

Headboard MT. VENTOUX with pillows

Possible options if choosing the bed with a headboard:

3 frame parts that are connected to the headboard. This way both the water mattress and the lying surface are extended at an unchanged bed length.

4 frame parts and a headboard installed on the base. This variant can also be used without a headboard.

- Frame upholstered with textile, genuine leather or artificial leather – a unique and individual look
- The safety liner is zipped to the lower section of the cover and is produced of thick mattress vinyl. It provides safety that not only looks good, but also makes the bed easier to care for (standard for NORDIC Q, optional for NORDIC).
- Straight cut mattresses provide a higher level of lying comfort as a result of the greater water volume (NORDIC Q).
- As always with AKVA you individually choose your favourite mattress system and level of stabilisation for maximum sleeping comfort.
- Possible headboards: see pages 36–37
- Can be combined with any base type (see page 23)

Combination of upholstered frame and beech veneer or decor finishes

Drawer in the base provides additional storage

Available as a soft-side version with sloping sides and as NORDIC Q with a straight cut mattress (see page 14 / 15)

AKVA MODULEX SELECT

This grand version of the bed MODULEX is the perfect choice for you, if you favour a modern box spring look. The visible part of the water mattress is reduced, whereas the wide frame attracts all the attention. Choose between an upholstered, a decor or a veneered bed frame. MODULEX SELECT will easily adapt to any ambience, and optionally it also comes with a spacious storage solution integrated in the base.

Optional LE Topper with Eucafeel® foam (see page 40)

- Frame upholstered with textile, genuine leather or artificial leather – a unique and individual look
- Alternatively veneered beech either stained or oiled, veneered oak or decor
- The safety liner is zipped to the lower section of the cover and is produced of thick mattress vinyl. It provides safety that not only looks good, but also makes the bed easier to care for (standard for MODULEX Q, optional for MODULEX).
- Straight cut mattresses provide a higher level of lying comfort as a result of the greater water volume (MODULEX Q).
- As always with AKVA you individually choose your favourite mattress system and level of stabilisation for maximum sleeping comfort.
- Possible headboards: see pages 36–37 (except for MT. COOK and EVEREST)
- If chosen with a headboard both water mattress and lying surface will be extended, as there is no foam frame at the head end.
- Combinable with BOX and drawer (on castors only) bases

Offered as MODULEX with sloping sides and MODULEX Q with a straight cut mattress (see page 14 / 15)

Optional drawers in the base for additional storage

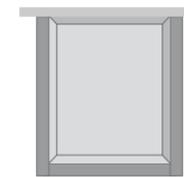

Here with headboard MT. VENTOUX COMFORT

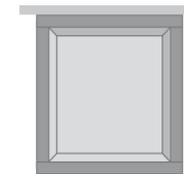

Combination with MT. VENTOUX headboard

Possible options if choosing the bed with a headboard:

3 frame parts that are connected to the headboard. This way both the water mattress and the lying surface are extended at an unchanged bed length.

4 frame parts and a headboard installed on the base. This variant can also be used without a headboard.

Extra storage in the practical ottoman

Offered as MODULEX with sloping sides and MODULEX Q with a straight cut mattress (see page 14 / 15)

A pronounced frame with an optically low mattress

AKVA MODULEX

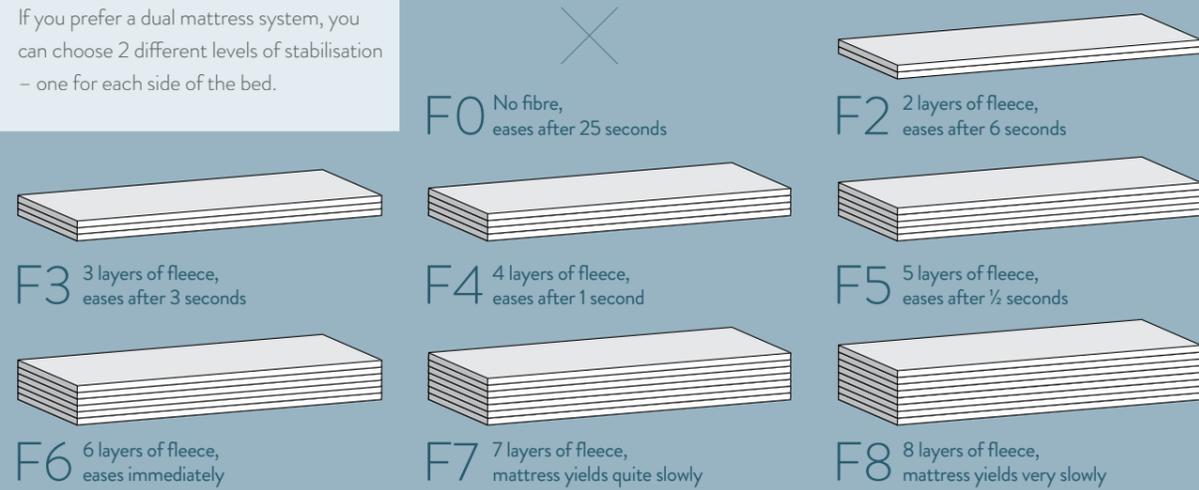

A modern and true master of transformation. With its striking bed frame MODULEX easily adapts to any bedroom, as it is offered both upholstered and in several decor as well as veneered beech or oak variants. Comfort and functionality reach their peak, as this bed can be combined with all headboards and base variants.

- Frame upholstered with textile, genuine leather or artificial leather – a unique and individual look
- Alternatively veneered beech either stained or oiled, veneered oak or decor
- The safety liner is zipped to the lower section of the cover and is produced of thick mattress vinyl. It provides safety that not only looks good, but also makes the bed easier to care for (standard for MODULEX Q, optional for MODULEX).
- Straight cut mattresses provide a higher level of lying comfort as a result of the greater water volume (MODULEX Q).
- As always with AKVA you individually choose your favourite mattress system and level of stabilisation for maximum sleeping comfort.
- Possible headboards: see pages 36–37
- Can be combined with any base type (see page 23)

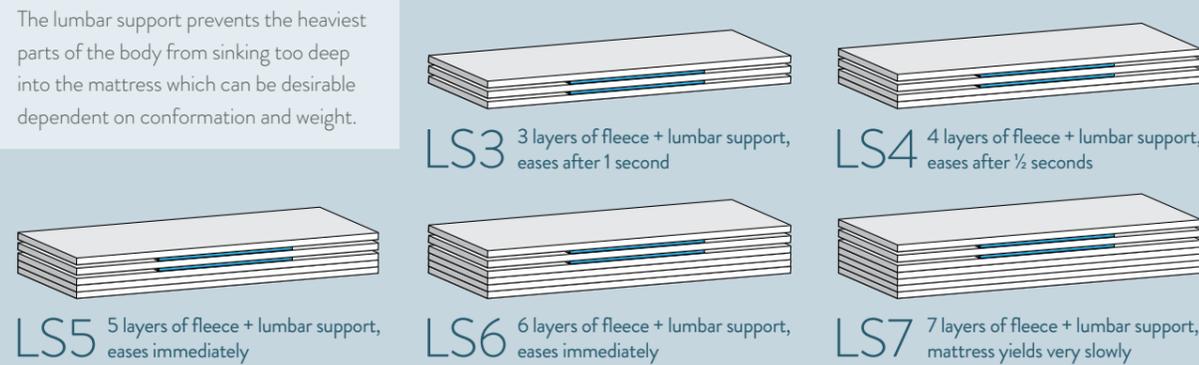

STABILISATION LEVELS

From comfort level F0 (no stabilisation) where the mattress reflects your every movement, up to F8 where every movement is instantly absorbed. It is also possible to get 2 optional fleece inlays for additional lumbar support.

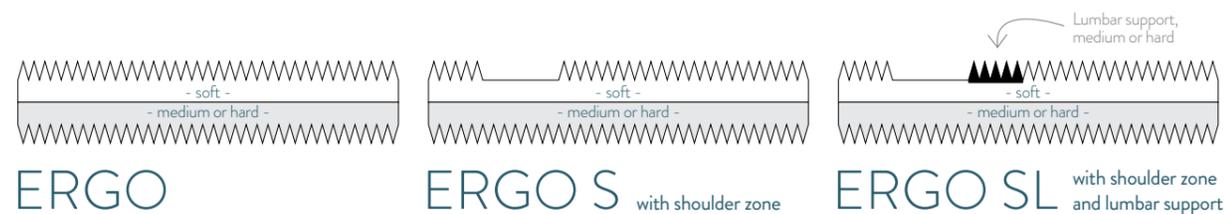

If you prefer a dual mattress system, you can choose 2 different levels of stabilisation – one for each side of the bed.

The lumbar support prevents the heaviest parts of the body from sinking too deep into the mattress which can be desirable dependent on conformation and weight.

The ERGO system is a series of fairly high stabilised water mattresses. Foam is used for stabilisation and designed in a way that makes it easier for you to turn and move in bed. The body is evenly supported by the water, and the specially developed shoulder zone optimizes the adaption to the contours of your body.

BASES

Drawer fronts may also be upholstered with **textiles** or **artificial leather** (except for storage and 8 box drawer bases).
Textiles and surface materials: see page 43

We offer many different base heights that you can choose between and also various types of storage solutions that go with most of the beds.
Choose between decor, stained or oiled veneered beech and oiled veneered oak.

Box base is standard: 10 – 37,5 cm

Box mirror base (heights 10 – 37,5 cm)

4 box drawers on castors or rails (heights 25 / 30 / 34 / 37,5 cm)

8 box drawers on rails (height 37,5 cm)

Storage base with a magnet close function (heights 25 / 30 / 34 / 37,5 cm)

BIG BOX drawers on castors make use of the full length and width of the bed (heights 25 / 30 / 34 / 37,5 cm)

BENTI (25 cm) on steel bearers, bed legs chromium coloured, height adjustable.

Aluminium corners in the following colours: black, white, chromium, beech veneer bases in stained or oiled beech veneer

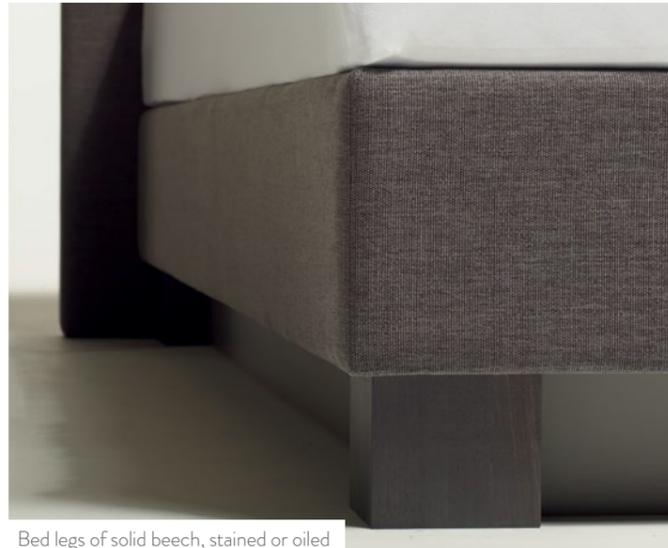

Clear lines, timeless elegance

WITH OUR **BOXKIT** YOU CAN CHANGE YOUR CURRENT STANDARD SOFT-SIDE BED TO A BOXBED.

Matching CUBE bedside table

Bed legs of solid beech, stained or oiled

AKVA BOXBED II

Extra height for maximum comfort. The BOXBED II bed system supplements the traditional box spring design with a comfortable height of almost 60 cm with the unsurpassed comfort of a water mattress. The voluminous mattress guarantees an excellent night's sleep, while the legs of solid, stained beech and the OLYMPUS headboard round off the contemporary style.

- Frame upholstered with a textile, genuine or artificial leather, but also in decor, stained or oiled veneered beech and oiled veneered oak for an individual and personalised appearance.
- Uncompromising, solid construction
- As always with AKVA you individually choose your favourite mattress system and level of stabilisation for maximum sleeping comfort.
- Possible headboards: see pages 36–37
- Optional with or without solid beech bed legs

Available as a soft-side version with sloping sides and as BOXBED II Q with a straight cut mattress (see page 14 / 15)

AKVA DECO

Classic elegance. The DECO bed does not only guarantee a good night's sleep. It is also a treat to the eye. Only the very best materials are used – perfectly crafted attending to every single detail. With its robust, solid, wooden frame and considering the wide range of design options, the luxury of a DECO will please all your senses.

ATLAS headboard

Solid beech frame, stained brown

- Frame of solid beech. Choose a base. Oil treated or stained. Various colours available.
- Very robust, also suitable for a high weight load
- Clever solution with a wide range of design options
- As always with AKVA you individually choose your favourite mattress system and level of stabilisation for maximum sleeping comfort.
- Possible headboards: see pages 36–37
- Can be combined with any base type (see page 23)

Available as a soft-side version with sloping sides (see page 14 / 15)

CUBE bedside table in artificial leather

WITH DRAWERS

AKVA NORI

A bed defines and influences the framework of our lives. We have created a piece of furniture as a tribute to the essence of sleep. NORI was designed by Oliver & Lukas WeissKrogh, and the bed is the unification of an unspoiled, classic look spiced with a modern retro touch. The charming appearance and unique versatility originates from a playful mix of materials, where textiles meet poles of solid oak or beech.

Frame height either 31 cm (bed without drawers) or 23 cm (bed with drawers)

- Frame upholstered with textiles or artificial leather
- 6 different headboard heights (72–92 cm) and 6 different foot end heights (32–52 cm) that can be combined
- Bed legs of solid oak or beech – lye-treated, white oiled, oiled or stained
- Combinable with soft-side, SOFT Q and hard-side bed systems
- As always with AKVA you individually choose your favourite mattress system and level of stabilisation for maximum sleeping comfort.

AKVA NORI

DESIGN:
OLIVER &
LUKAS
WEISSKROGH

Poles of solid oak or beech

Drawer base with 23 cm frame height

Available as a soft-side version with sloping sides and as SOFT Q or as a hard-side version with a straight cut mattress (see page 14 / 15)

AKVA LYRA

Young at heart. LYRA combines clear design with uncompromising comfort, and it is extremely suitable for smaller bedrooms. The pure sleeping comfort of the original hard-side waterbed system meets modern technology. A geometric, youthful design that reflects clearly defined lines. If you are looking for a genuine waterbed, then LYRA is the right choice for you.

Decorative stitching

- Frame upholstered with a textile or artificial leather – a unique and individual look
- Artificial leather always with stitchings – either in a matching or different colour
- Uncompromising design permits the installation of hard-side mattresses
- Base (available in four heights) also with optional drawers
- The solid LYRA frame enables an extended lying surface at full 22 cm height in all directions.
- As always with AKVA you individually choose your favourite mattress system and level of stabilisation for maximum sleeping comfort.
- Possible headboard: LYRA (only available with a headboard)

The drawer base provides a lot of storage space

The drawers slide under the bed frame

Available as a hard-side version
(see page 14 / 15)

AKVA SOFT

Outside tradition, inside innovation. The interior of the SOFT Q is constructed with a new type of frame that enables straight cut foam. The lying surface is therefore increased, and the frame is very stable and comfortable to sit on. The SOFT Q is ideal both for installing inside an existing bed frame, but also suitable for free-standing installation with a headboard.

- SOFT Q: Larger water volume with the straight cut water mattress provides even more comfort.
- As always with AKVA you individually choose your favourite mattress system and level of stabilisation for maximum sleeping comfort.

Available as a soft-side version with sloping sides and as SOFT Q with a straight cut mattress (see page 14 / 15)

Storage base with removable front panels

... or with drawers

AKVA SOFT

JUNIOR

If you turn the world upside down all day long, you deserve a good night's sleep. Our JUNIOR bed ensures that children sleep well and is also great for bouncing.

Available as a soft-side version with sloping sides (see page 14 / 15)

INSIDE

INSIDE is the ideal solution for everyone who longs for the comfort of a waterbed, but still wants to keep their current bed frame. You simply replace your existing mattress with the INSIDE model. This way you can enjoy the comforts of a water mattress without having to make major alterations in your bedroom.

SPLIT SOFT FRAME

The waterbed is self-supporting and is therefore suitable as a 'bed in a bed'.

Offered as INSIDE with sloping sides and INSIDE Q with a straight cut mattress (see page 14 / 15)

- Can be fitted into almost any standard bed frame
- High level of comfort due to the soft-side frame
- Advanced construction with split soft frame permits easy handling when making the bed.
- INSIDE is produced in many standard sizes. You will always find the right size of mattress to fit your existing bed frame.
- Do you have a customised bed frame? Obviously we can make a fitting mattress.
- Also available as INSIDE Q water mattress with straight sides
- With reduced foam at head and foot end for an extended lying surface

AKVA BABY

Uninterrupted and natural sleep from birth to three years of age. The BABY water mattress moulds to the baby's body providing optimum support. The pleasant result? Your child does not wake up as often anymore and the sleep becomes deeper. Consequently the sleep of the parents will be too!

The inside of an AKVA BABY mattress

OFFERED IN
IN 55 x 115 cm,
60 x 120 cm OR
70 x 140 cm

- Optimum support and peaceful sleep
- With the Oeko-Tex Standard 100 (product class 1, suitable for babies and small children), the mattress is free of harmful substances.
- AKVA BABY has the same features as all AKVA waterbeds – perfect hygiene and an antiallergic design with washable covers and wipe-off mattresses.
- The design of an AKVA BABY mattress does not permit penetration of dust mites.
- An insulating layer placed on the water mattress supercedes the use of a heating system.

close mechanism, a robust back-
side fastened with screws, available
in decor and beech veneer. (Special
sizes on request.)

WATERBED ACCESSORIES

AKVA PROTECT Top Liner

With the PROTECT Top Liner you save lots of time on cleaning and maintenance. The washable protective layer is easily zipped on to the existing cover of your waterbed. Now dead skin particles and dust cannot penetrate and end up on the water mattress.

LE Topper (Low Energy Topper)

This set contains a zip-on cover-like pocket containing a foam inlet that brings even more softness and cosy comfort to all AKVA waterbeds, and, of course, it can also be installed in existing beds. The EUCAFEEL® foam is pressure relieving, particularly breathable and temperature regulating, because it can actually absorb moisture. Due to its high level of insulation energy can be saved, as the heating system, if wanted, can be set at a lower temperature or even completely turned off, if the conditions are right.

AKVA Comfort Top

Are you looking for a particularly cosy sensation? Then the Comfort Top is just the right choice for you. The top comprises a strong fibre filling that has a cushioning and heat regulating effect. The fibre filling also makes it easier to get in and out of bed.

Massage systems

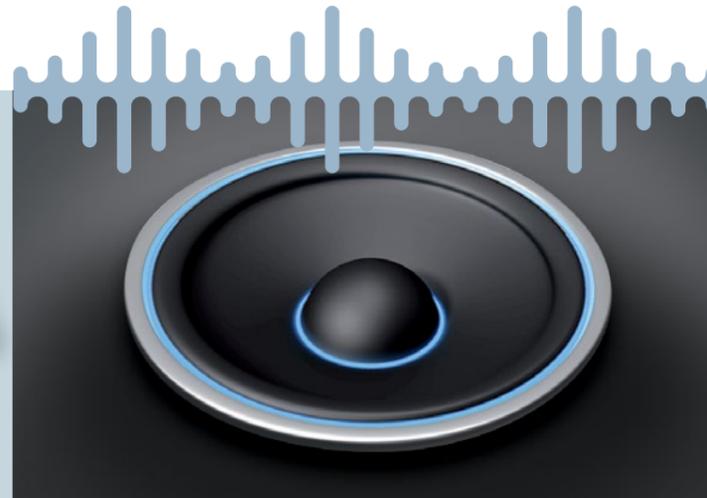

We offer two different massage systems for your waterbed:

1. The massage system for installation under your water mattress. You can choose different massage levels and programmes with the remote control.
2. The direct massage system Sense 8 is a massage mat that you can use on your waterbed and, of course, also on your sofa or living room floor.

Water pillow

A water pillow is a means of completely relaxing your neck and spine. The pillow adapts perfectly to the shape of your neck area and is heated by the water mattress, providing a feeling of well-being without tense neck muscles. You can define your individual comfort level by adjusting the water volume just like a water mattress. The cover of the pillow is washable and the vinyl can be washed off. This is hygiene at its best.

AKVA SOUND

Your waterbed can take your perception of movies and music to a new and higher level. With the AKVA SOUND audio system you do not only hear the sounds with your ears. You also feel them in your body. The innovative system transmits sounds and movie effects as vibrations through the water. You have never felt movies or your favourite music so intensely. AKVA SOUND makes the water vibrate and ensures you a differently intensive, audiovisual experience.

CARE

A water mattress from AKVA is a long-lasting quality product. The lifespan can even be extended when regularly using care products. This is why AKVA has developed some products that ensure you both security and the best possible hygiene.

Long Life

Add this once a year to keep the water fresh.

Vinyl Wash

Biodegradable detergent for cleaning the surface of the water mattress.

AKVA Guard

Seals the surface of the mattress and thus extends the lifetime of the vinyl.

Care Kit

All care products needed for a year: the complete kit with Long Life, AKVA Guard and Vinyl Wash.
